Summary

Frontend Software Engineer with 3+ years of experience building and scaling high-performance, user-facing web applications. Strong expertise in React and Next.js, with a deep focus on frontend architecture, Core Web Vitals, and performance optimization in high-traffic environments. Proven ability to translate product and experimentation insights into measurable business impact, including improvements in conversion, stability, and page performance. Experienced in collaborating across product, design, and backend teams to deliver reliable, scalable frontend systems.

Experience

Solveda Software — Software Developer (Frontend)
Delhi NCR

Feb 2023 – Present

- Architected and developed core frontend modules for an enterprise e-commerce platform using **React.js and Next.js**, powering critical revenue-generating user flows. Designed and implemented a secure Wallet system supporting saved cards and addresses, reducing checkout friction **improving the order conversion rate** to about **15%** and improving repeat purchase behavior. Reworked checkout experience by introducing fast-checkout and resume-purchase flows using API-driven feature flags, improving completion rates for returning users.
- Instrumented **GA4 dataLayer events** across key user journeys, enabling detailed funnel analysis and data-backed UX decisions. Shipped multiple **A/B-tested features** in collaboration with product teams, resulting in sustained improvements in conversion metrics.
- Led performance and layout stability initiatives and significantly improved **Core Web Vitals**. Worked on improving nextjs applications performance and stability by revamping the code hence **improving memory and cpu utilization** of pods - bringing pod restart needed every **30 minutes** to almost no restart needed for the whole sprint.
- Worked with **SEO** team on recommendations **improving the organic traffic** to about **22%**. Actively contributed to code quality through reviews, mentorship of junior engineers, and frontend best-practice adoption.

CSC E-Governance Services — Software Engineer
Delhi NCR

Jun 2022 – Jan 2023

- Built a cross-platform desktop reconciliation application using React.js, Electron.js, and Tailwind CSS to compare large datasets based on configurable business rules.
- Engineered high-performance file comparison logic capable of processing datasets with up to **500,000+ records**. Leveraged Service Workers and optimized data processing pipelines, reducing reconciliation time from **5 minutes to under 10 seconds**.
- Migrated encryption and security-related logic from PHP to Node.js, improving runtime performance, code maintainability, and long-term scalability.

Personal Projects

LaxMock — AI Mock Interview Platform [<https://laxmock.com>]

- Built an AI-powered mock interview platform supporting **text and video-based interviews** with real-time speech-to-text using **OpenAI Whisper**, and **gpt text to speech**. Implemented structured interview flows with dynamic follow-up questions using **gemini API**, code editor support, and drawing-based answers for system design questions.
- Designed scalable frontend architecture using **Next.js**, **Typescript** and **Tailwind CSS**, with backend APIs with **Prisma/Postgres** deployed on **GCP/Cloud Run**.
- Integrated subscription-based payments using **Razorpay**, with usage-based credit limits and plan enforcement.

Skills

Languages & Frameworks: JavaScript (ES6+), React.js, Next.js, Node.js, PostgreSQL, Electron.js, Typescript

Frontend & UI: HTML5, CSS3, Tailwind CSS, Material UI

Tools & Platforms: Git, JIRA, Razorpay, GCP, Prisma

Core Concepts: Web Performance, Core Web Vitals, Accessibility (a11y), A/B Testing, Feature Flags, Service Workers, Web sockets, Server sent events

Education

Bachelor of Technology

Guru Gobind Singh Indraprastha University
